Exploratory analysis

Site-year with rainfall event

```

site_year_rfeventR <- flumeR %>%
  select(SiteID, Year, sample_event) %>%
  unique()

ggplot(site_year_rfeventR, aes(Year, SiteID, fill=sample_event)) +
  geom_tile()

```

Number of samples

Calculate the number of observations for each treatment-position-year-site-time combination.

```
TSS_countsR <- flumeR %>%
  group_by(Year, SiteID, sample_event) %>%
  distinct() %>%
  summarize(n = n(), .groups = "drop")
```

Plot the number of observations for each combination.

```
g <- ggplot(TSS_countsR, aes(x = Year, y = SiteID, fill = n)) +
  geom_tile() +
  geom_text(aes(label = n), color = "white") +
  scale_fill_gradient(low = "blue", high = "red") +
  theme(axis.text.x = element_text(angle = 45, hjust = 1))
```

g

```
##ggsave("fig/soilpad_counts_no_diversion.png", g, width = 12, height = 12)
```

Data visualization

```
hR <- ggplot(flumeR, aes(x=ln_ppt, y=ln_tss_load, color=Treatment)) +  
  geom_point() +  
  geom_smooth(method=lm, se=FALSE, fullrange=TRUE) +  
  ggtitle("Log-log relationship between TSS load and rainfall accumulation \n(random dataset)") +  
  theme(plot.title = element_text(size=14, face="bold",hjust = 0.5))  
hR
```

'geom_smooth()' using formula 'y ~ x'

```
#ggsave("fig/randReg_ppt_load.png", hR, width = 12, height = 12)
```

Main Analyses

There are three main analyses of interest:

- confirmatory, design-based analysis
- exploratory, covariate analysis
- relationship of sediment flow to sediment loss

```
#mR_flume <- lmerTest::lmer(log(tss_load+0.005322915) ~
#                               #(1 | SiteID) +

```

Check assumptions

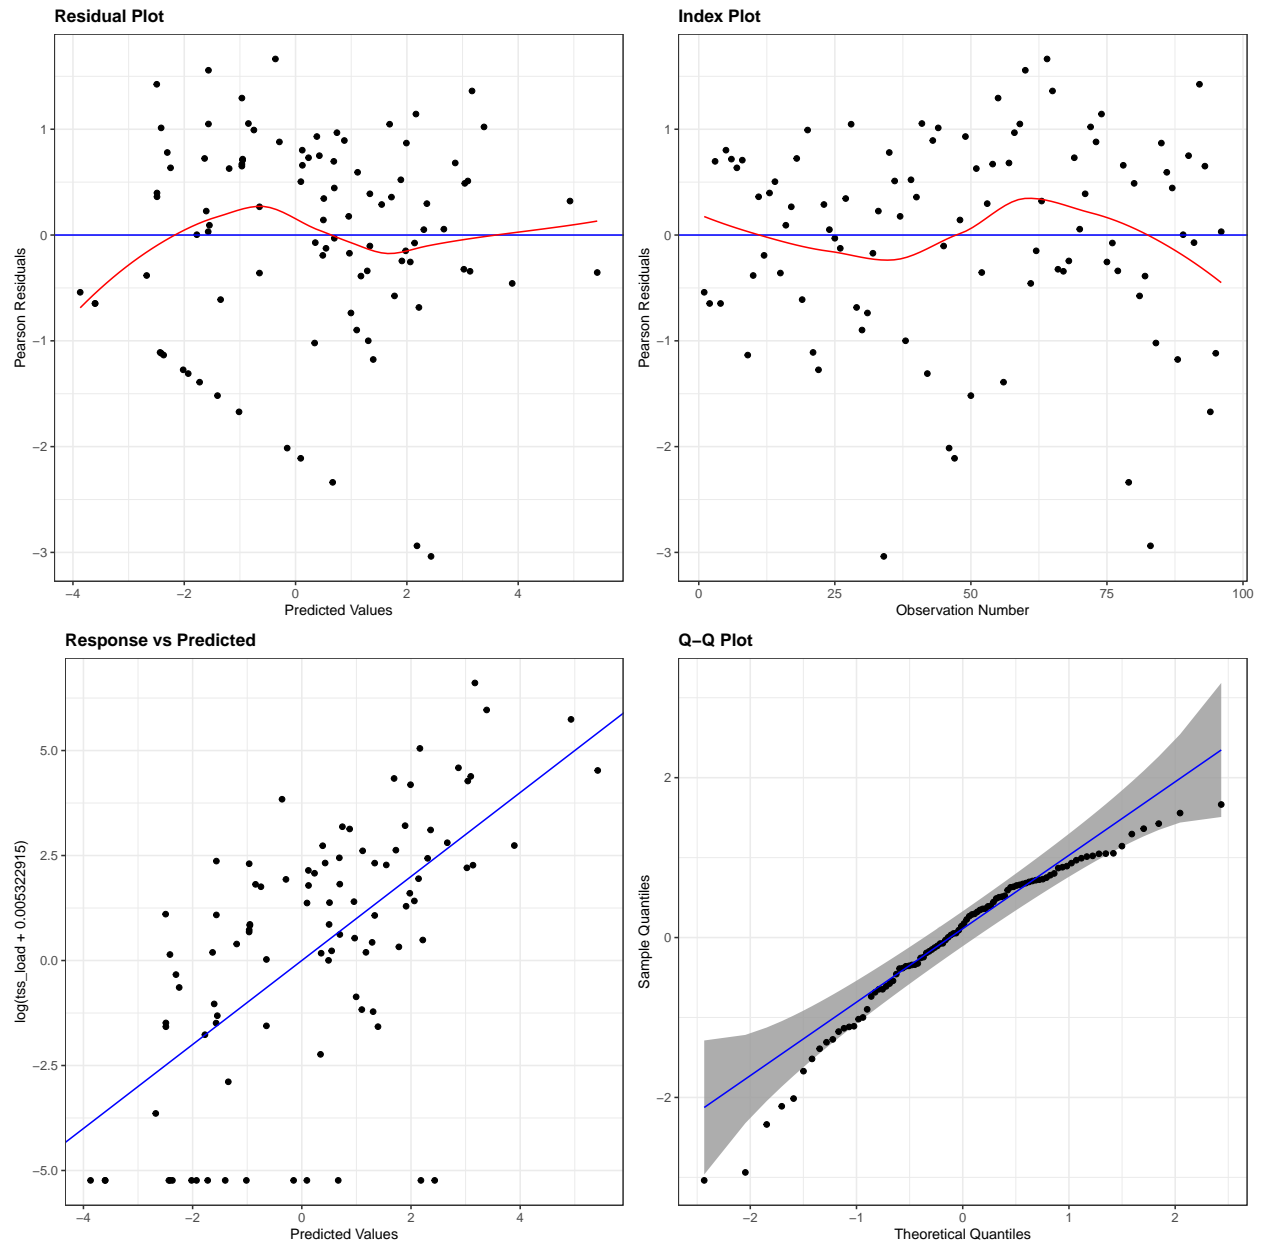

There are two possible models:

- mR_flume: full model design, design-based analysis
- mR_flume_model: model design selected based on backward step selection

Full model design

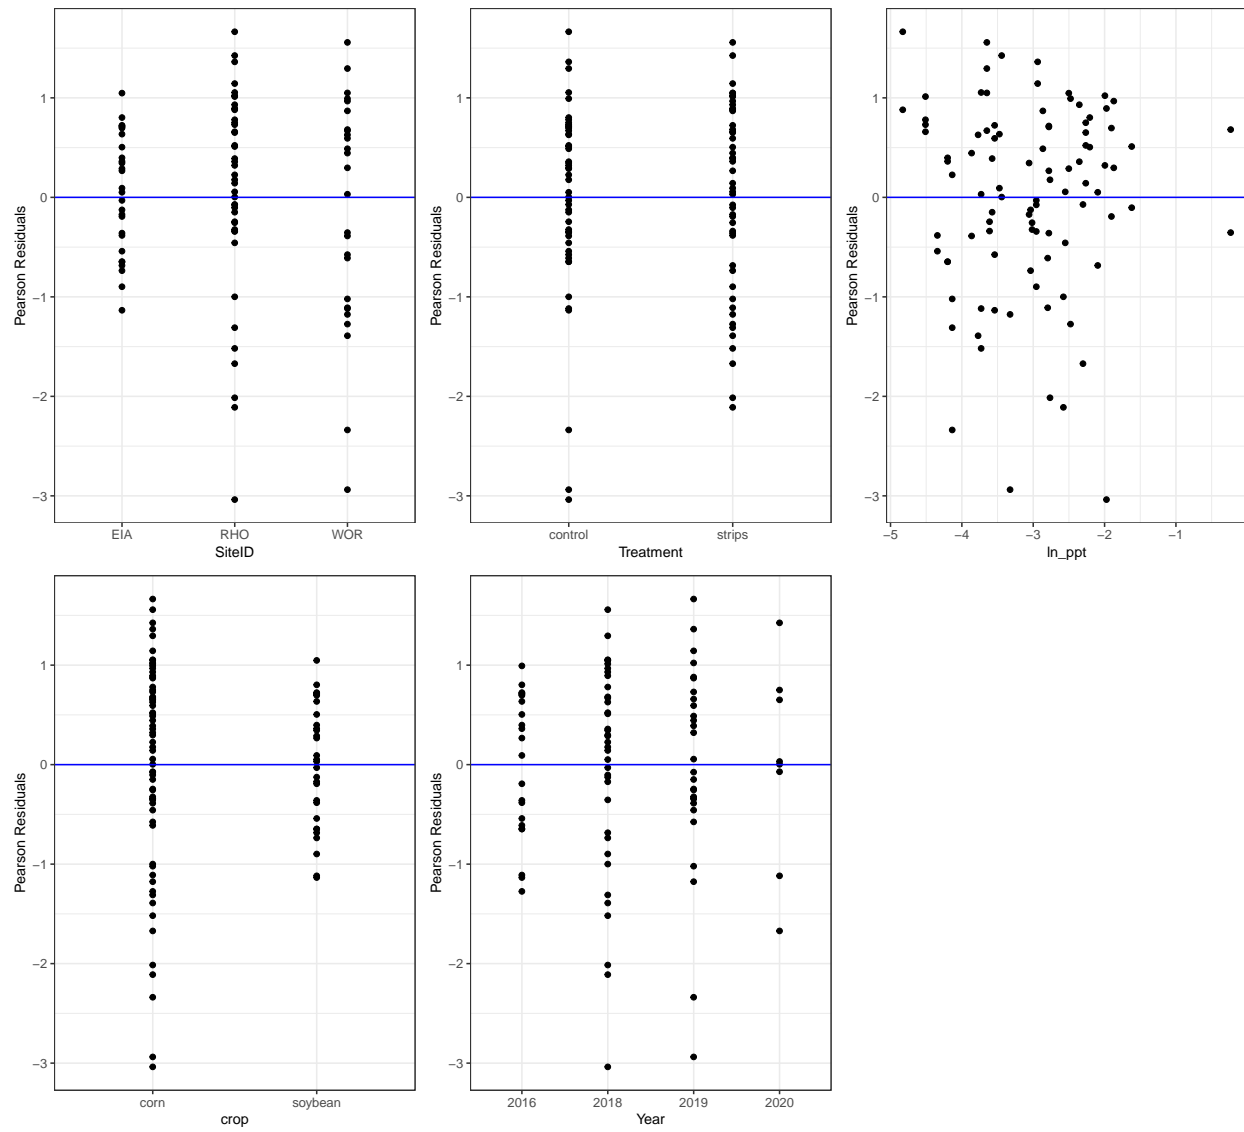

```
resid_panel(mR_flume,
            plots = c("resid", "index", "yvp", "qq"),
            smoother = TRUE, qqbands = TRUE)
```

```
## 'geom_smooth()' using formula 'y ~ x'
## 'geom_smooth()' using formula 'y ~ x'
```

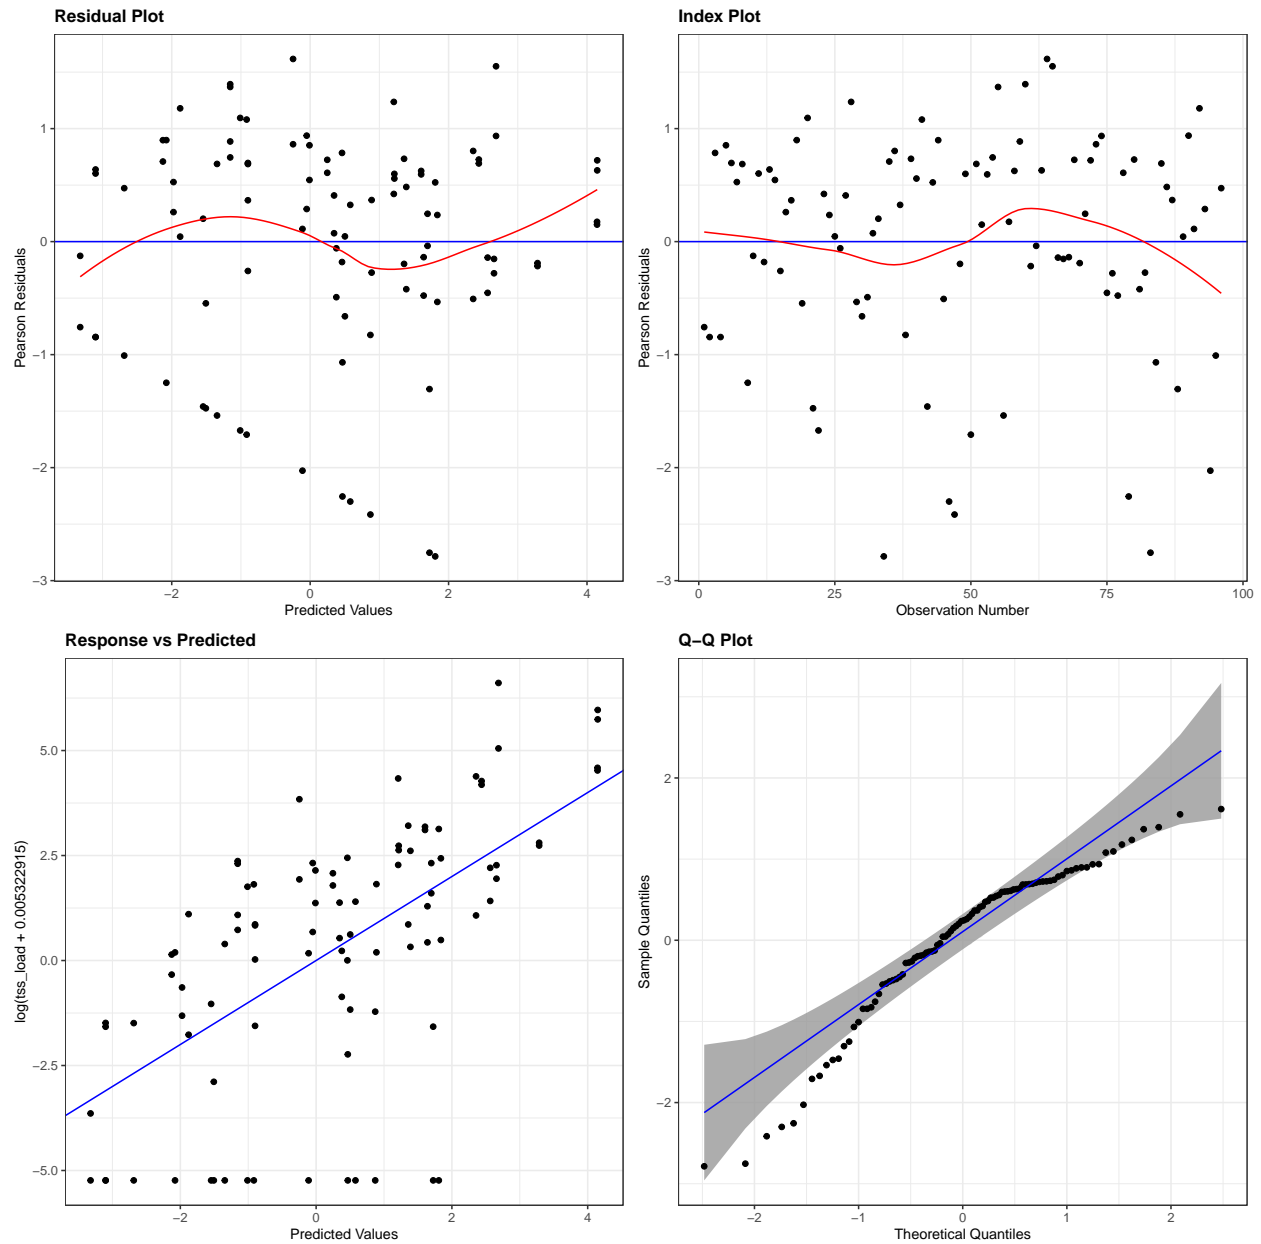

```
resid_xpanel(mR_flume)
```

Plots of Residuals vs Predictor Variables

```
resid_panel(mR_flume_model,
            plots = c("resid", "index", "yvp", "qq"),
            smoother = TRUE, qqbands = TRUE)
```

```
## 'geom_smooth()' using formula 'y ~ x'
## 'geom_smooth()' using formula 'y ~ x'
```

```
resid_xpanel(mR_flume_model)
```

Plots of Residuals vs Predictor Variables
